....

I'll follow up with Steve next week and see if we can be more specific on those measurements.

It is changed back to @ 3 su to 7 su, which makes no sense at all. That is no way to communicate with the public.

Hi, Bill. Thanks for adding the document. I just have one request – please put “su” back in the captions where Steve had them. He probably had them there for a reason, and since neither of us are sure what they mean, I don't think we should delete them without his concurrence.

Thanks!

It is done, Cynthia. The photo log is linked from several places on the site Web page.

Hi, Bill.

Could we get these photos up on the Upper Animas webpage under Red and Bonita? I'm not sure if we need to download these or if we could just save this document as a PDF and upload it as is. Just let me know if there is any follow up for me.

Thanks!

Hello Folks,

Here are a few photos of the ongoing operations to manage the 500 gpm flow while the underground is mucked out to the bulkhead area at approximately 300 feet. The mine crew had mucked about 80 feet as of Thursday, so we're about on schedule and hope to increase the rate of production now that we have the treatment system tuned. The mine crew was having equipment challenges that we hope to have solved today.

I'll send you some more next week and a Polrep soon.

Steve
